

Adaptiva Companion

Overview

Adaptiva Companion™ extends the functionality of Microsoft System Center Configuration Manager for fast and convenient PC power and configuration management. Adaptiva Companion leverages existing IT resources to enhance the operation of Configuration Manager without disrupting service to end-users.

- One client for both PC power and configuration management.
- Tightly integrated with Microsoft's Configuration Manager.
- Centrally manage power profiles and power down PCs during non-work hours. Enable end-users to set individual power profiles to maximize savings with the Adaptiva extension, **Green Planet**.
- Achieve complete control and visibility on system maintenance—wake up PCs during non-work hours, perform maintenance and restore the power state. Eliminate disrupting end-users with time-consuming software updates.

Features & Benefits

- **Fast to Deploy, Fast ROI.** Installs in just three minutes. Your return on investment (ROI) is nearly as fast with an average return in less than three months.
- **Simplify IT Operations.** Easy to integrate as Companion utilizes existing ConfigMgr policy framework. With a keystroke, centrally control scheduled or instant awakening of PCs for maintenance during non-work hours, perform maintenance and restore. Better manage software and hardware inventories. Run commands before shutting down.
- **Reduce IT Costs and Increase Energy Savings.** Lower power and cooling costs, and save up to \$75 per PC annually.
- **Increase End User Productivity.** PCs can be switched on when users arrive and automatically powered down during non-work hours. Eliminate downtime with software updates performed during non-work hours. Enable users to wake PCs remotely for off-hours accessibility. Add **Adaptiva Green Planet** and encourage end-users to further define custom profiles to increase savings.
- **Detailed Reporting.** Adaptiva Companion offers comprehensive reporting with more than 30 reports available with just a click. Learn daily or monthly power usage and events per collection or PC pre- and post Companion, and more. With the addition of Green Planet, identify PC energy waste, needed updates and distribution and actual savings.
- **Minimize Your Environmental Impact.** Just 1,000 PCs left on during non-work hours on average consumes 176,00 kWh, emits 127 tons of CO₂ and costs \$17,800 annually. Centralizing power capabilities can significantly reduce energy use and dramatically lessen the impact of computing on the environment.
